C style constants

For each input line, interpret if it as a hexadecimal number (if it begins with 0x), an octal number (if it begins with 0), and a decimal number otherwise, and output its value in decimal.

Score is the length of your source.

Input

The input file consists of series of numbers (as described above) one in each line.

The input is terminated by EOF.

Output

The decimal value of the given number.

Example

Input:

0146

0xcd

0x188

0611

0x37d

0x0

0x1

01

0x2

Output:

102

205 392

393

893

0

1

1 1

2

PS: Take care about your fingers, do not use more than **128 bytes of code**.
