

# NSquare Sum ( Easy )

Given two integers  $N$  ( $N \leq 10^{18}$ ) and a prime number  $P$  ( $1 < P < 10^{18}$ ), find the lowest number  $x$  such that there're not  $N$  integers greater or equal to 0 whose sum of squares is equal to  $x$ .

$$N = 2, P = 2$$

$$x = 3 \pmod{2} \\ = 1$$

$$0 = 0^2 + 0^2$$

$$1 = 1^2 + 0^2$$

$$2 = 1^2 + 1^2$$

$$4 = 2^2 + 0^2$$

## Input

There're two integers  $N$  ( $1 \leq N \leq 10^{18}$ ) and a prime number  $P$  ( $1 < P < 10^{18}$ ). You have to print the answer modulo  $P$ .

## Output

You have to print an integer  $x \pmod{P}$  ( $-1 < x < 10^{18} + 1$ ) that satisfies the problem. If there's no number  $x$ , print "Impossible".

## Example

**Input:**

1 3

**Output:**

2

**Input:**

13 7

**Output:**

Impossible
