

# The Quine

A **quine** is a computer program which produces a copy of its own source code as its only output. The standard terms for these programs in the computability theory and computer science literature are **self-replicating programs**, **self-reproducing programs**, and **self-copying programs**.

Your task is to write a **quine** of source length greater than 1 byte.

## Input

There is no input to this problem.

## Output

The output is your code itself. For example if your code is "**abcde**" the required output is "**abcde**".

## score

Score is the length of your code.
